

Ellon Academy

Gender neutral washrooms and locker systems for a new build academy.

Petal's washroom systems are leading the way in the drive for improved washroom privacy. It's becoming an increasingly topical subject with some of the latest new builds opting for gender neutral washrooms like these in the £36 million Ellon Academy which demand maximum privacy for the protection of privacy and comfort of the pupils.

Petal provides a full range of privacy options including the Thor Plus floor to ceiling cubicle system as installed at Ellon Academy. The Thor Plus system can facilitate all layouts and includes the option of outward opening doors to meet accessibility needs while still retaining the high levels of privacy required.

Petal build maximum strength and stability into their systems through the use of continuous wall channels which add strength and impact resistance to the cubicle structure.

The high quality detailing on these systems includes special tamper proof fixings, three hinges per door and highly durable hardware, all resulting in very low level maintenance required.
