

Blanchardstown

Petal’s approach to washroom solutions helps reposition Blanchardstown as a premier retail venue.

Petal’s full height Line Ultra WC cubicles and solid surface vanity troughs helped to reposition Blanchardstown Shopping Centre as a ‘premier’ commercial venue.

Petal worked alongside Lafferty Architects and Graham Interior Fit-Out to provide a Line Ultra cubicle solution in 20mm CGL in a woodgrain finish for doors and pilasters with 12mm CGL divisions. P300 APS wall paneling was manufactured to suit the vanity unit as well as the impressive perimeter wall lining.

Solid surface trough units with integral upstands and removable under paneling in matching compact grade laminate provide an attractive vanity area, which is finished with 6mm thick safety mirrors mounted above the vanity units. The addition of separate grooming stations in the female toilets help avoid congestion at these washing facilities.

All elements throughout the project were both manufactured and installed by Petal, giving a seamless solution to the client from project inception right through to completion.
