

St Joseph's School

Top Class Cubicle & Washroom Installation for £19.6m School Project.

Petal's Thor Plus toilet cubicles at a height of 2.4m provided full height privacy in a striking manner for this impressive new school construction project.

Petal's Thors Plus range is a semi-framed cubicle system which has been continually proven to meet the grade in any school environment, having been designed specifically to tackle the rigours of a busy school environment and all the rough and tumble that can attract.

Petal's P300 Advanced Panel System in matching laminate colours ensured a consistency of design and achieved a striking aesthetic for the interior of the cubicles.

At vanity level, postformed high pressure laminate units were installed with 12mm CGL removable panelling underneath for ease of maintenance and a steel sub frame for stability. All vanity units include a split level for disabled provision, which was an important theme across the project, with outward opening doors and spacious cubicles in every location.
