

Sancroft

Petal's experience in Luxury Commercial Washroom solutions has culminated in this superb installation in London's prestigious Paternoster Square. A combination of full height high gloss Line Plus cubicles with contrasting duct & access panelling and premium solid surface vanity units achieved a striking aesthetic across all 10 floors of this mixed-use commercial venue.

Working with Buckley Gray Yeoman architects, main contractor McLaughlin & Harvey and specialist sub-contractor Guildprime, Petal manufactured and installed a range of elegant yet hard wearing washroom solutions to include WC cubicles, duct & access panelling and vanity units. Petal's Line Plus cubicles in 2400mm height achieve the ultimate in privacy, with a minimum clearance providing a floor to ceiling privacy result. The dark grey AR+ gloss laminate finish to cubicle doors commands a luxurious look and feel and is especially compelling in contrast with the bright white AR+ gloss laminate interiors.

At vanity level, the premium finish continues with individual bowls surface mounted onto the solid surface vanity units.

Sancroft Staff Facilities

A combination of lockers and bench seating, together with solid surface vanity units and grooming stations help create a beautiful space for staff of this prestigious Paternoster Square commercial office space in London.

The attention to detail for the staff facilities in the sub-basement level of this London project help create a result every bit as impressive as the Premium washroom facilities in the floors above.

Action lockers were chosen because of their durability and moisture resistance and a total of 575 Z-style lockers were installed, achieving a dramatic appearance, especially given the choice of an AR+ gloss laminate finish.

The choice of a douglas fir hardwood bench seating provides a striking contrast to the lockers above, and again achieves a strong, durable finish befitting of the performance required for this area. Solid surface grooming stations/vanity units complete the premium finish on this project, with seamless joints and rounded edges achieving a look in keeping with the overall effect.
